

QtSAS | Fit-Curve(s)

v. 2021-02-17

Fit-Curve(s): easy Fit mode - eFit

eFit mode of the fitting interface is aimed to simplify standard fitting procedures, when the fitting function is prepared for the “easy” fitting procedure in advance. For example, in this presentation the form factor of the cylinder is shown. This form factor has many parameters, but by default only three is fittable (adjustable): length, diameter and volume fraction of cylinders. Additionally, many different fitting options could be set in advance on the level of the function compilation...

Two ways of **eFit** usage:

a) via **Fit.Curve(s)** interface:

1. Select **Data Range** of the active curve in active Graph;
2. Select Function in the **Fit.Curve(s)** interface;
- 3.a Push Button “**eFit**” in the **Fit.Curve(s)** interface;
- 3.b Push Button “**eFit+++**” in the **Fit.Curve(s)** interface.

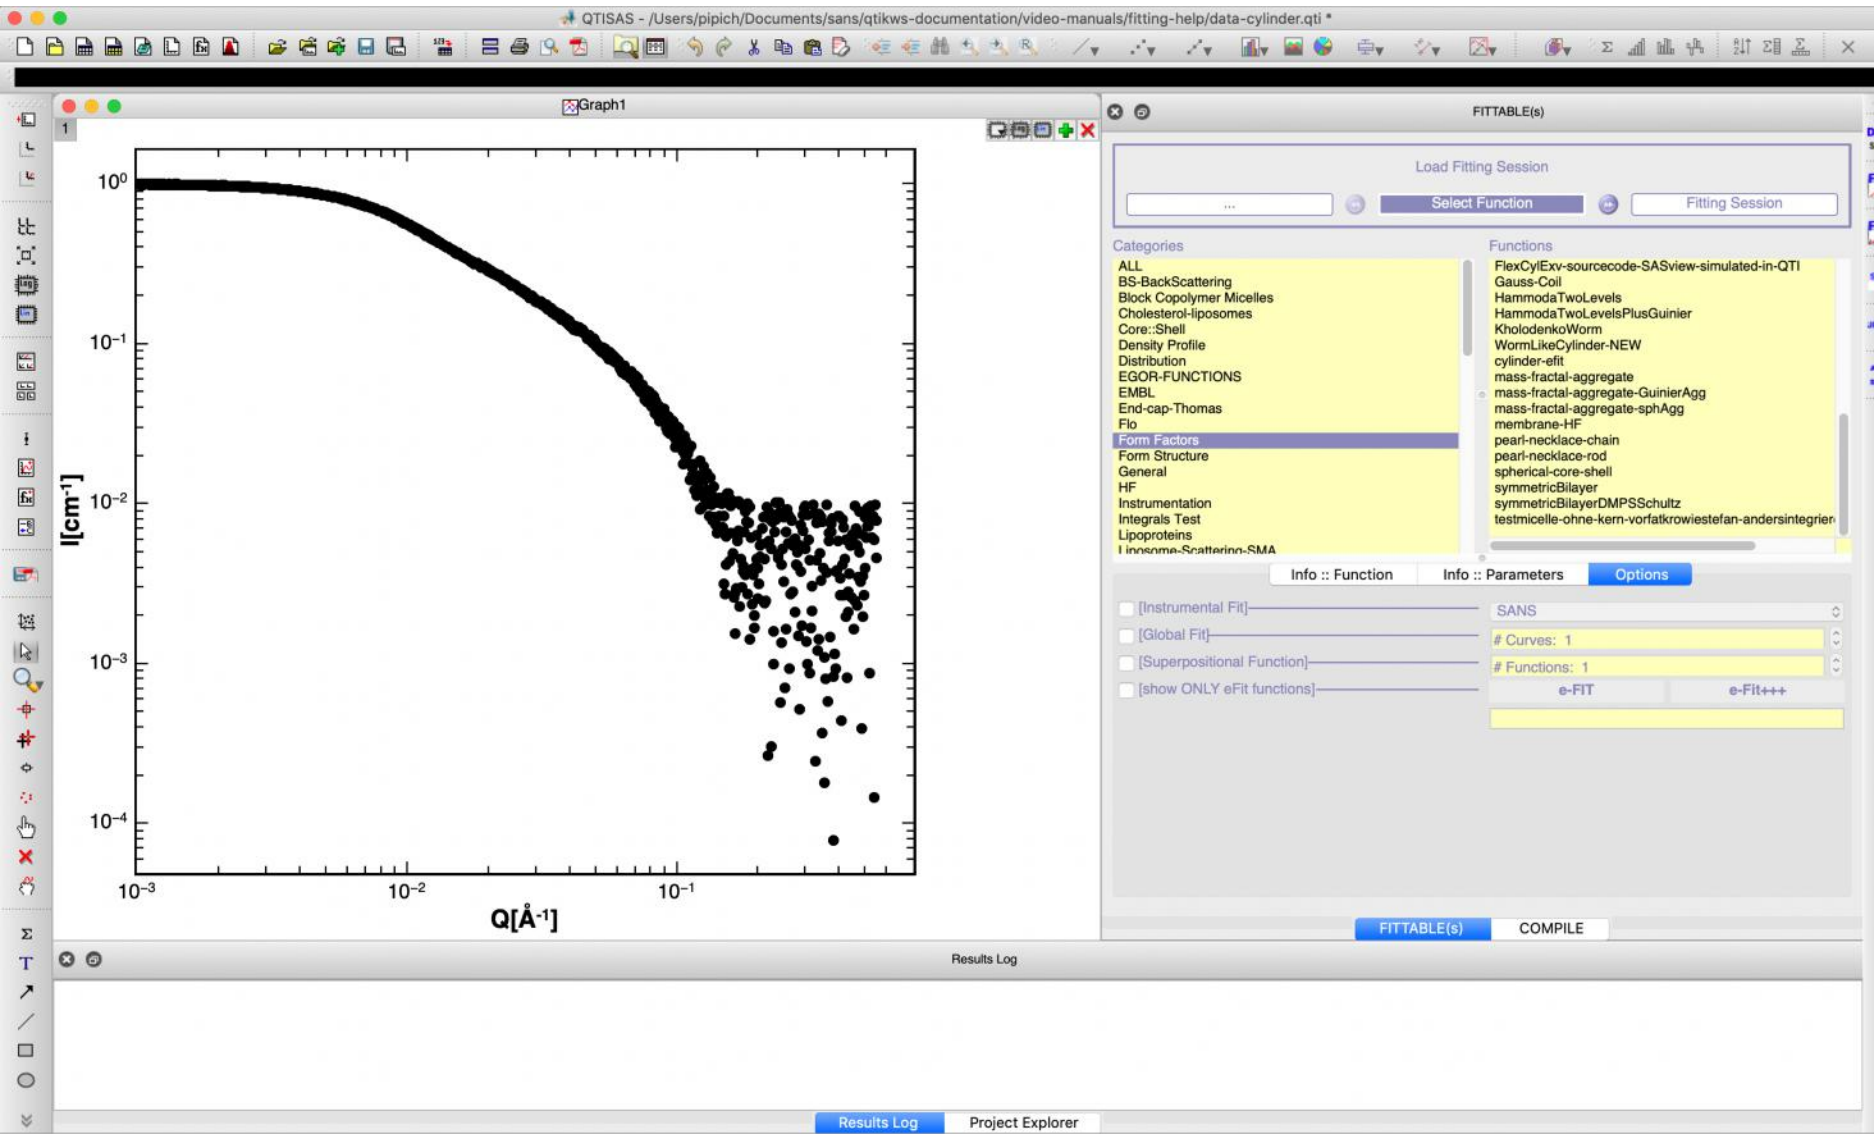

b) Via **Analysis|eFit** Menu:

1. Select Data Range of the active curve in active Graph;
2. Select eFit function in **Analysis|eFit** Menu of **QtSAS**.

eFit via `Fit.Curve(s)` interface

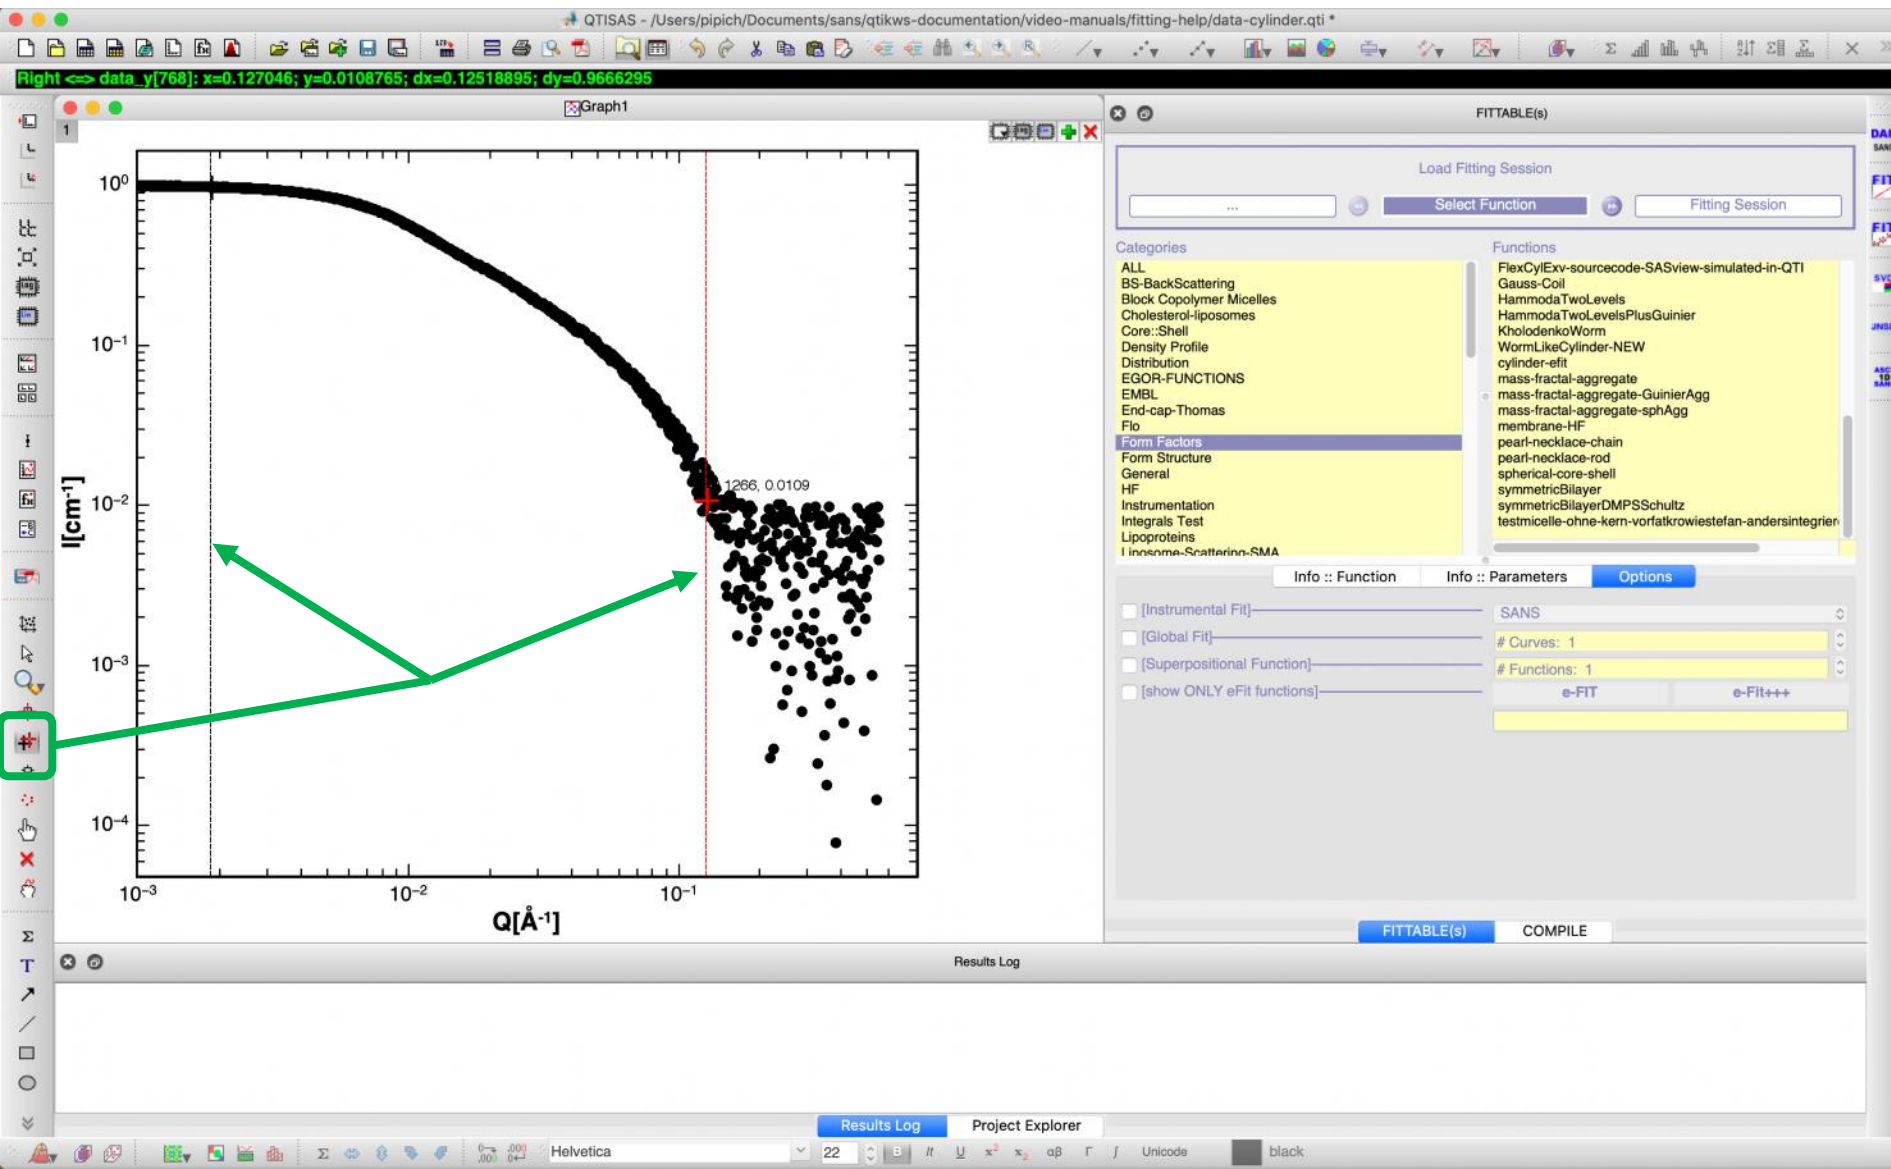

via **Fit.Curve(s)** interface:

Data is plotted in the Graph; Fit.Curve(s): **Options** tab activated

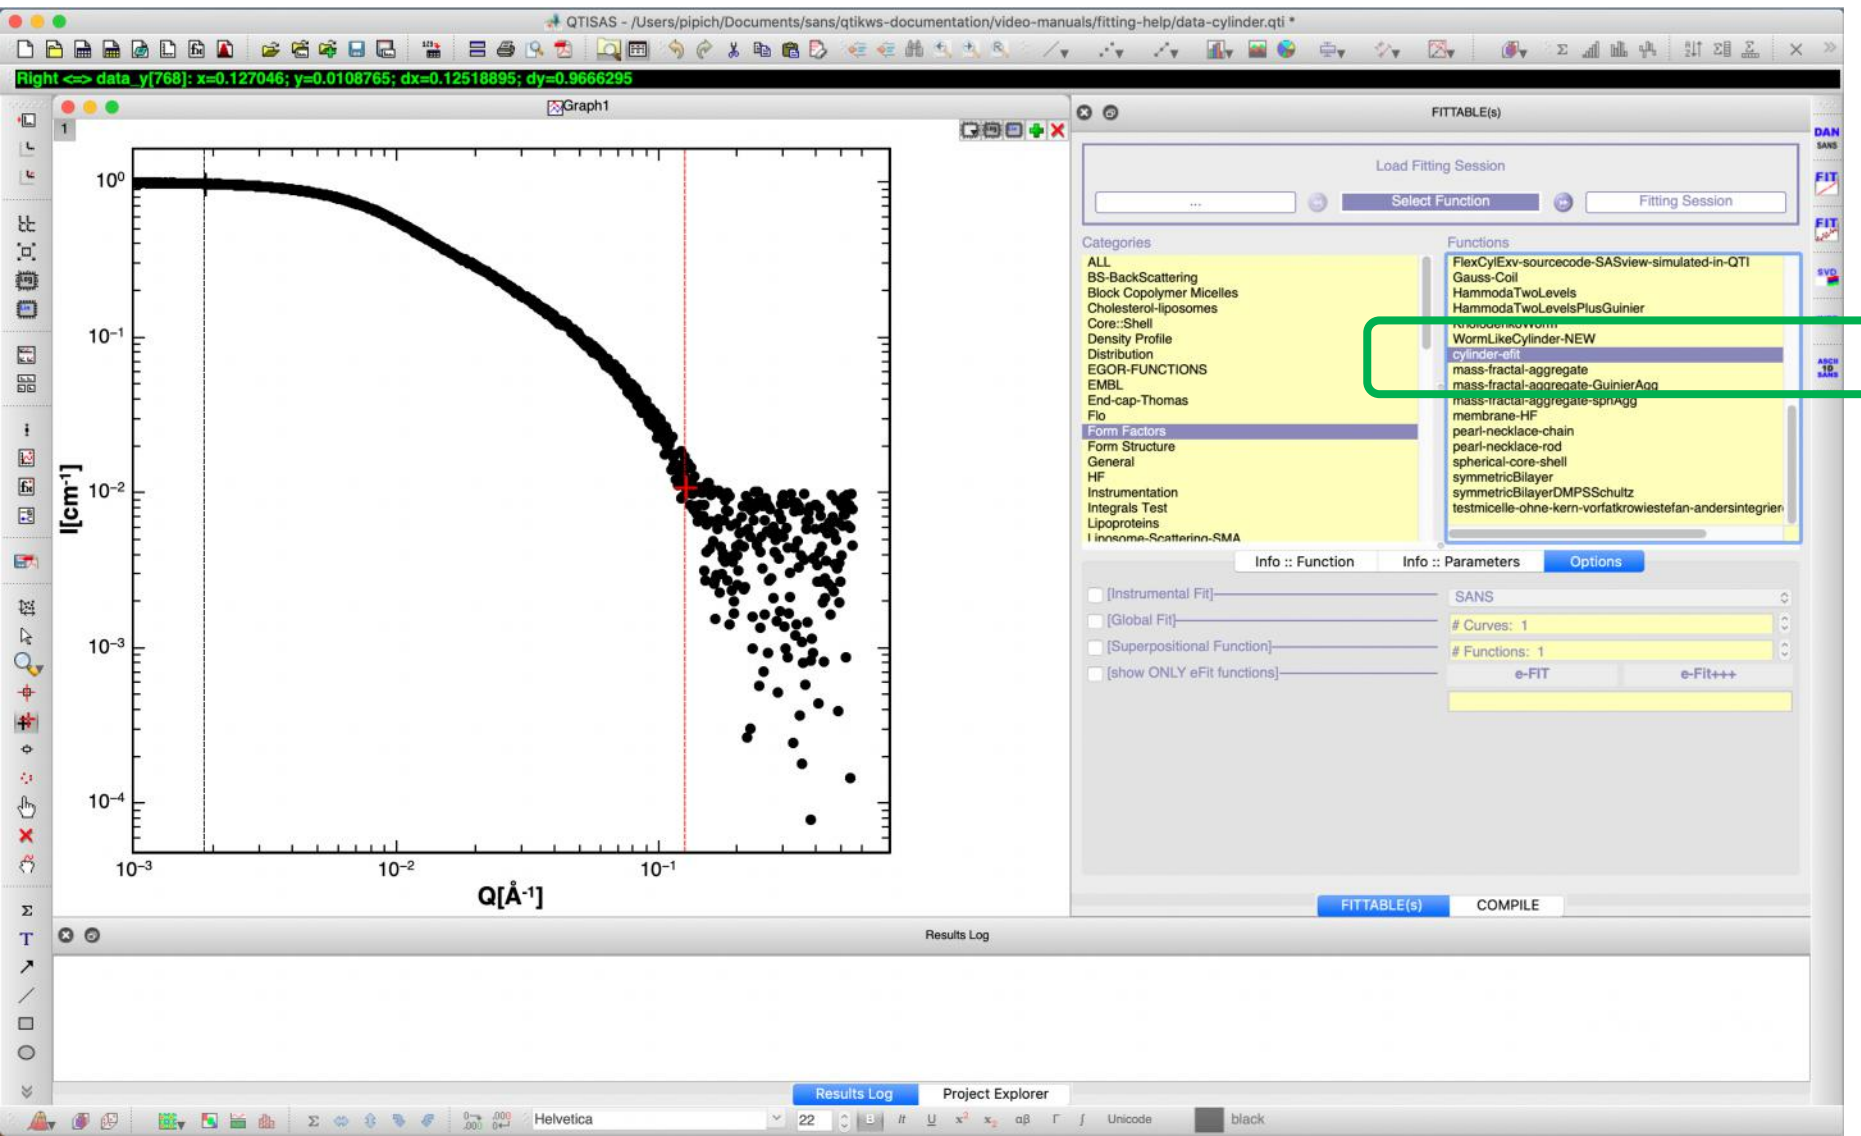

via **Fit.Curve(s)** interface:

Step.1 Select **Data Range** of the active curve in active Graph

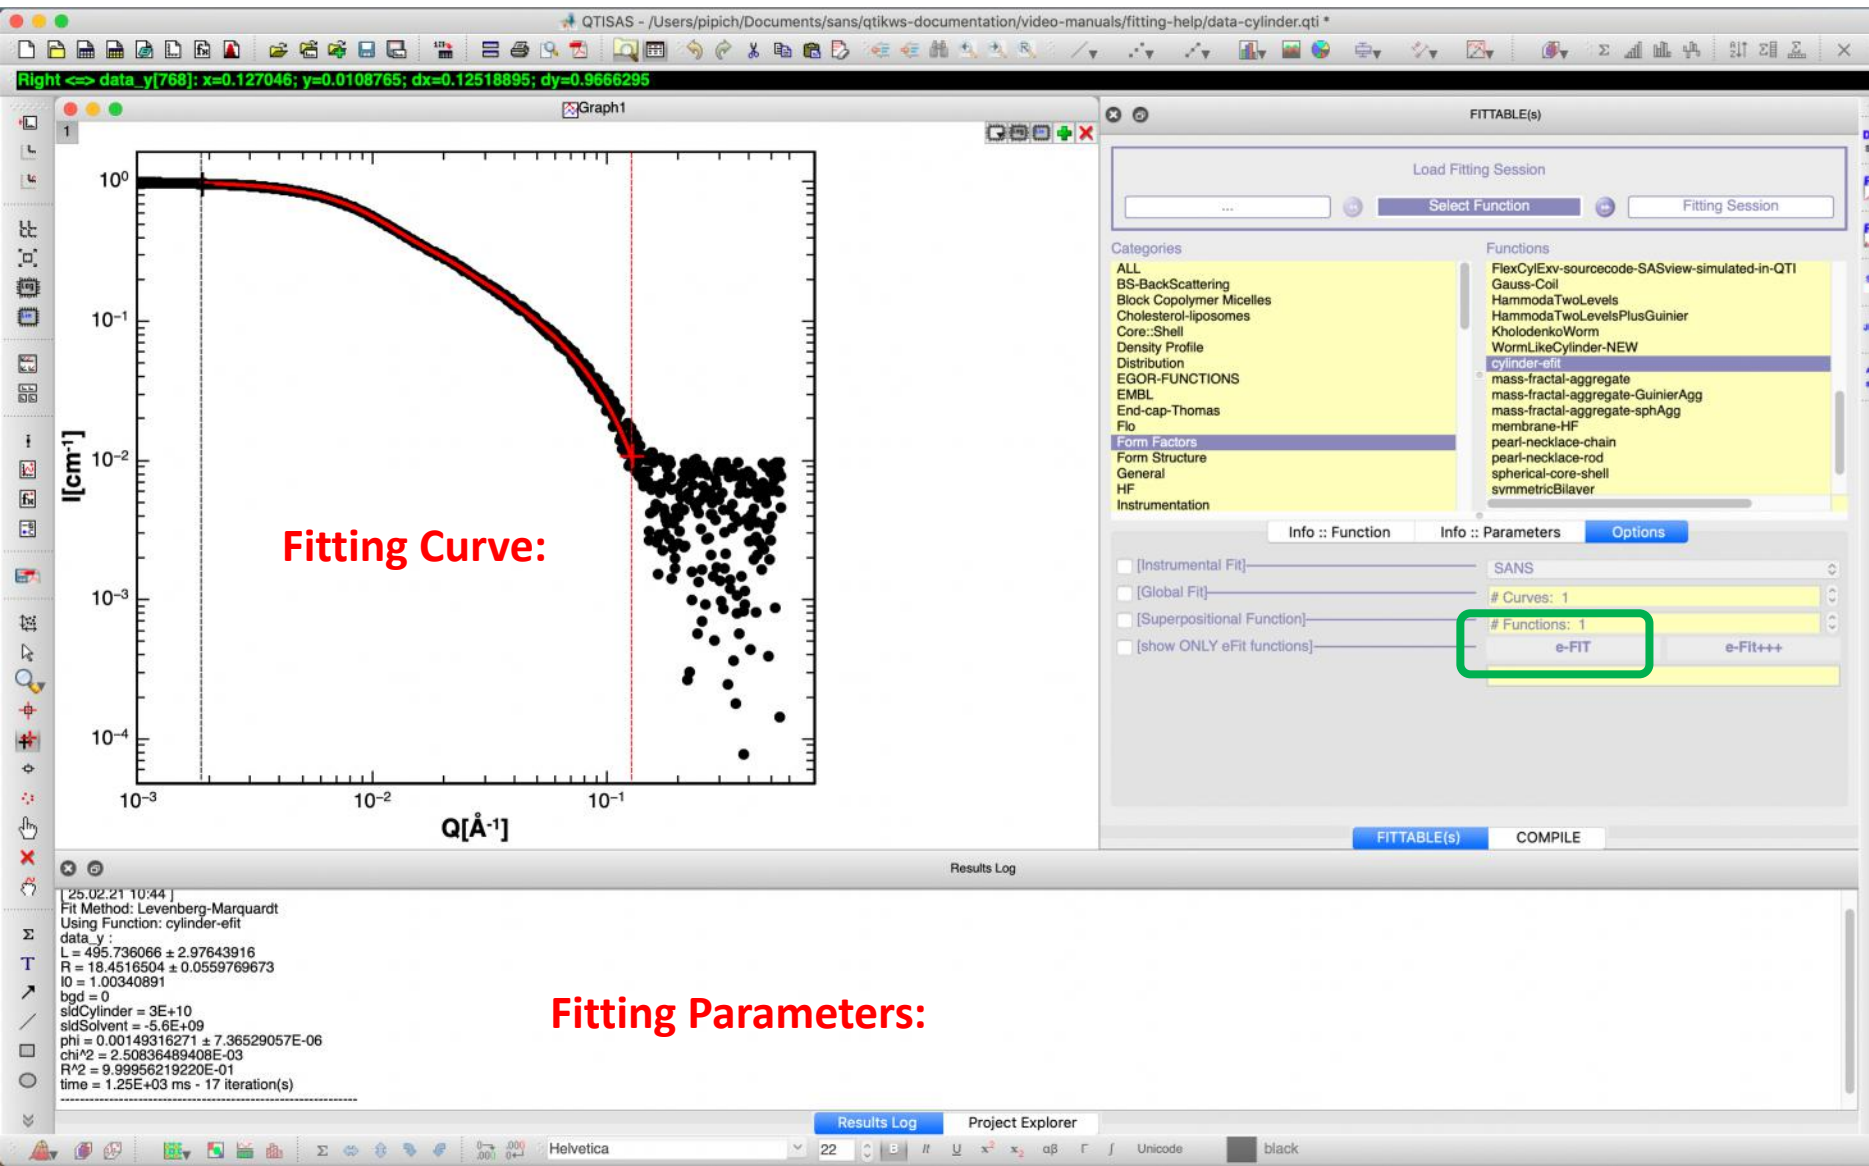

via **Fit.Curve(s)** interface:

Step.2 Select **Function** in the Fit.Curve(s) interface;

via **Fit.Curve(s)** interface:

Step.3a Push Button “**eFit**” in the Fit.Curve(s) interface

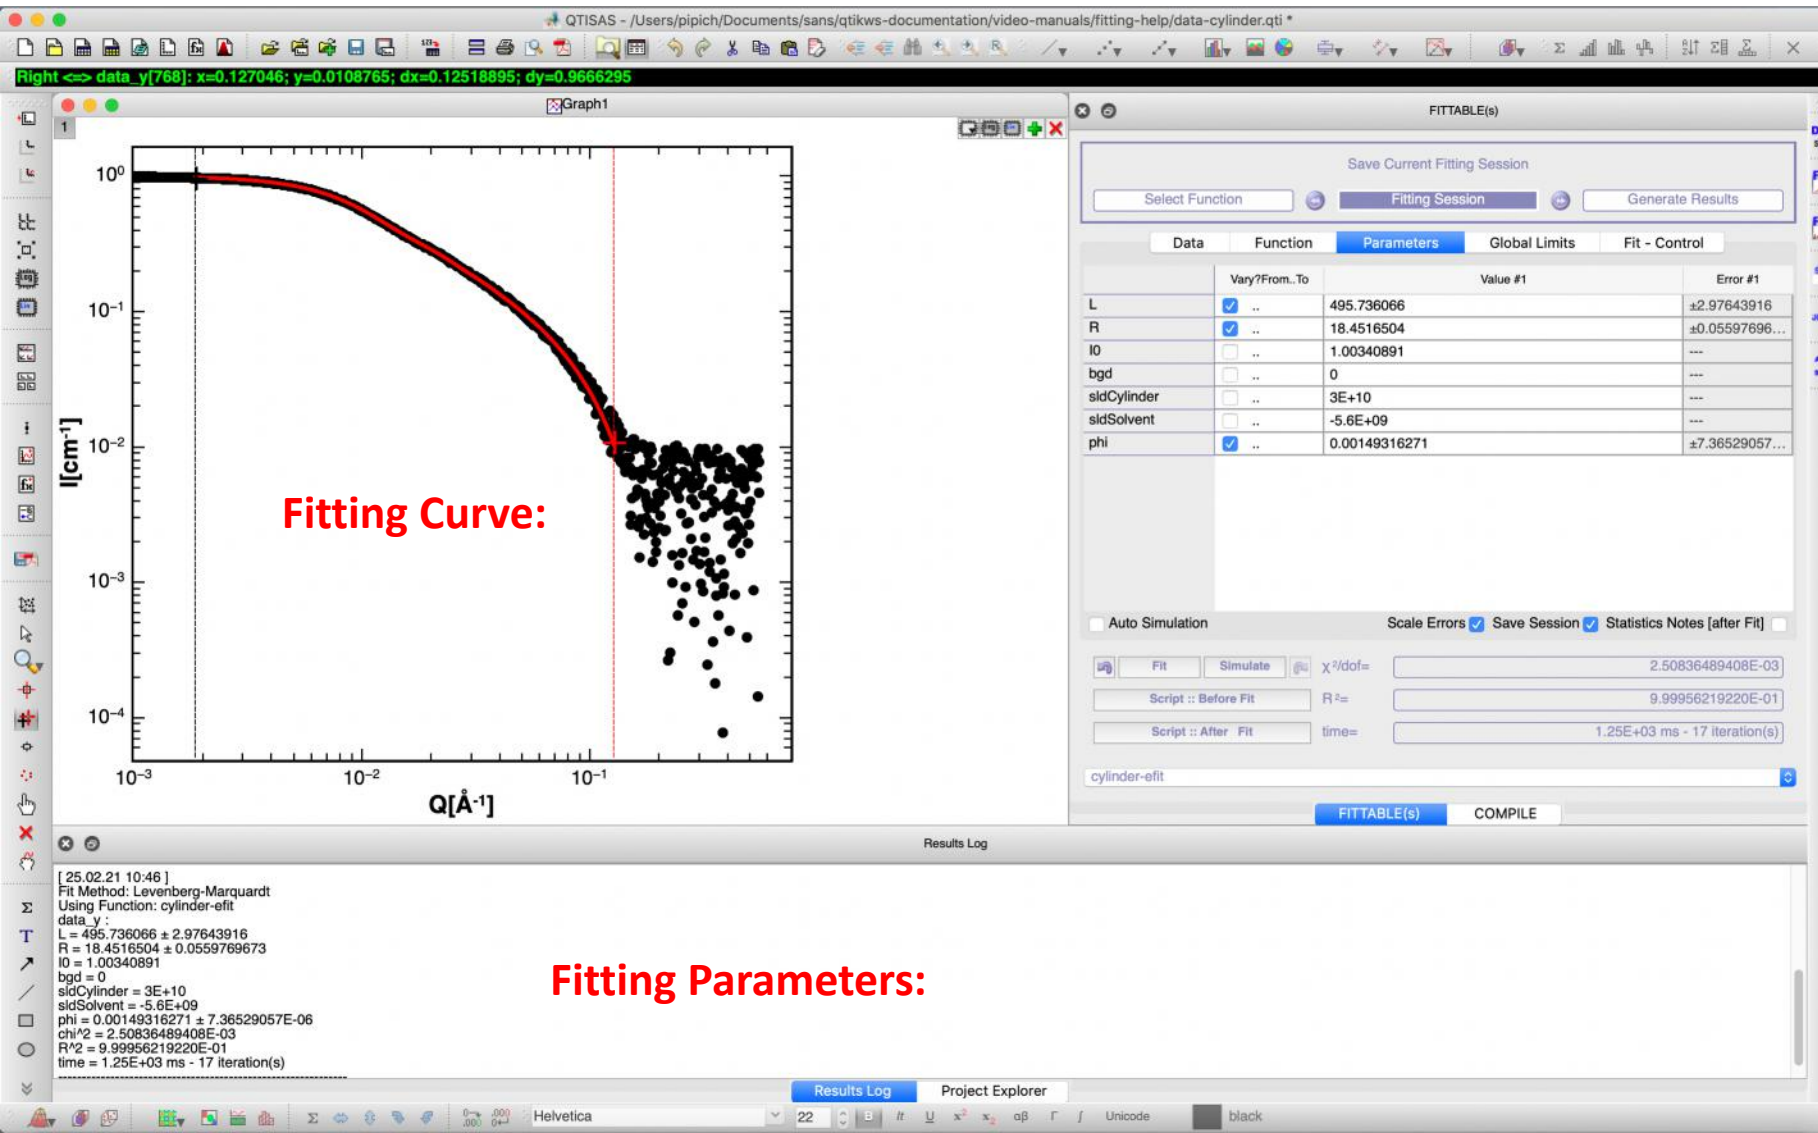

Fitting Parameters:
- Shown in “Results Log”

Fitting Curve:
- Shown in the Graph

via **Fit.Curve(s)** interface:

Step.3b Push Button “**eFit+++**” in the Fit.Curve(s) interface

Fitting Parameters:
- Shown in “Results Log”

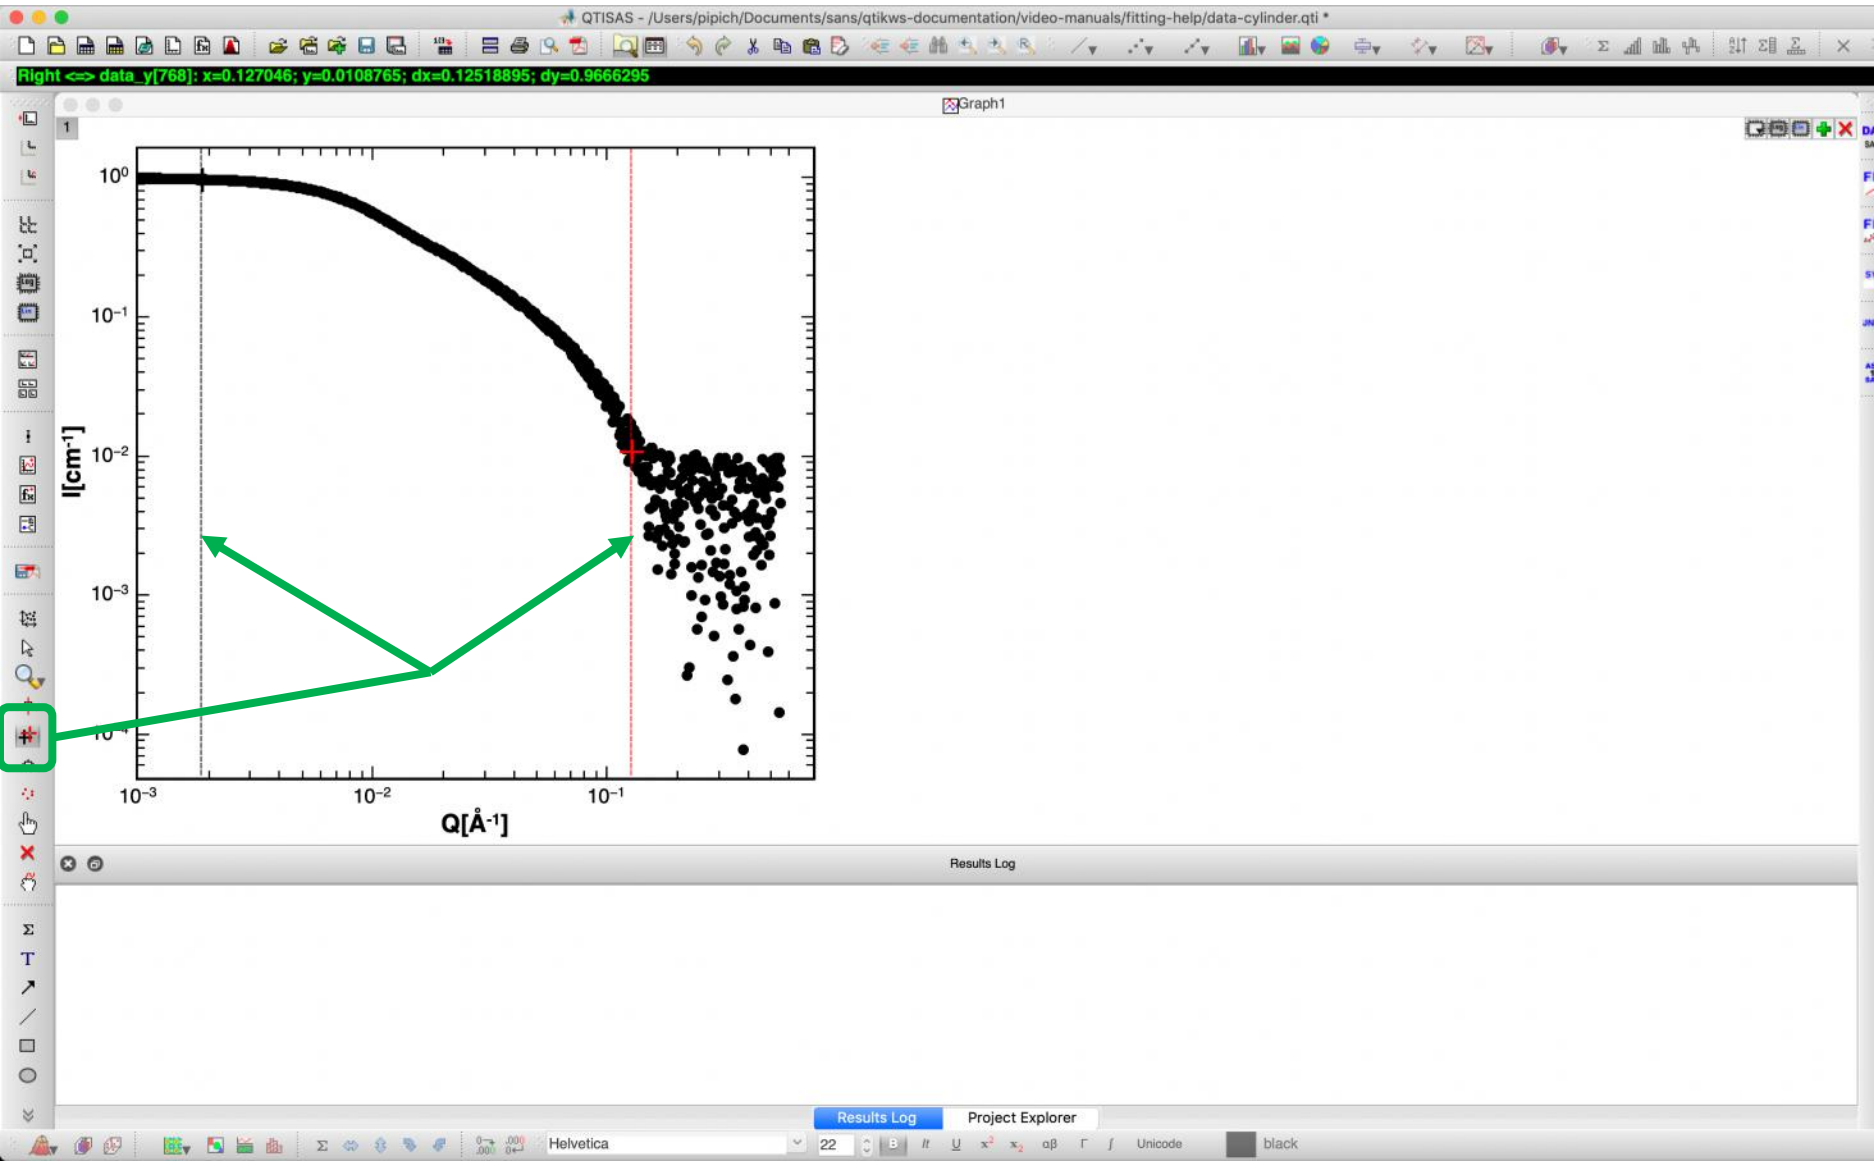

Fitting Curve:
- Shown in the Graph

Fit.Curve(s) interface is ready
for next fitting actions

eFit via **Analysis** | **eFit** Menu

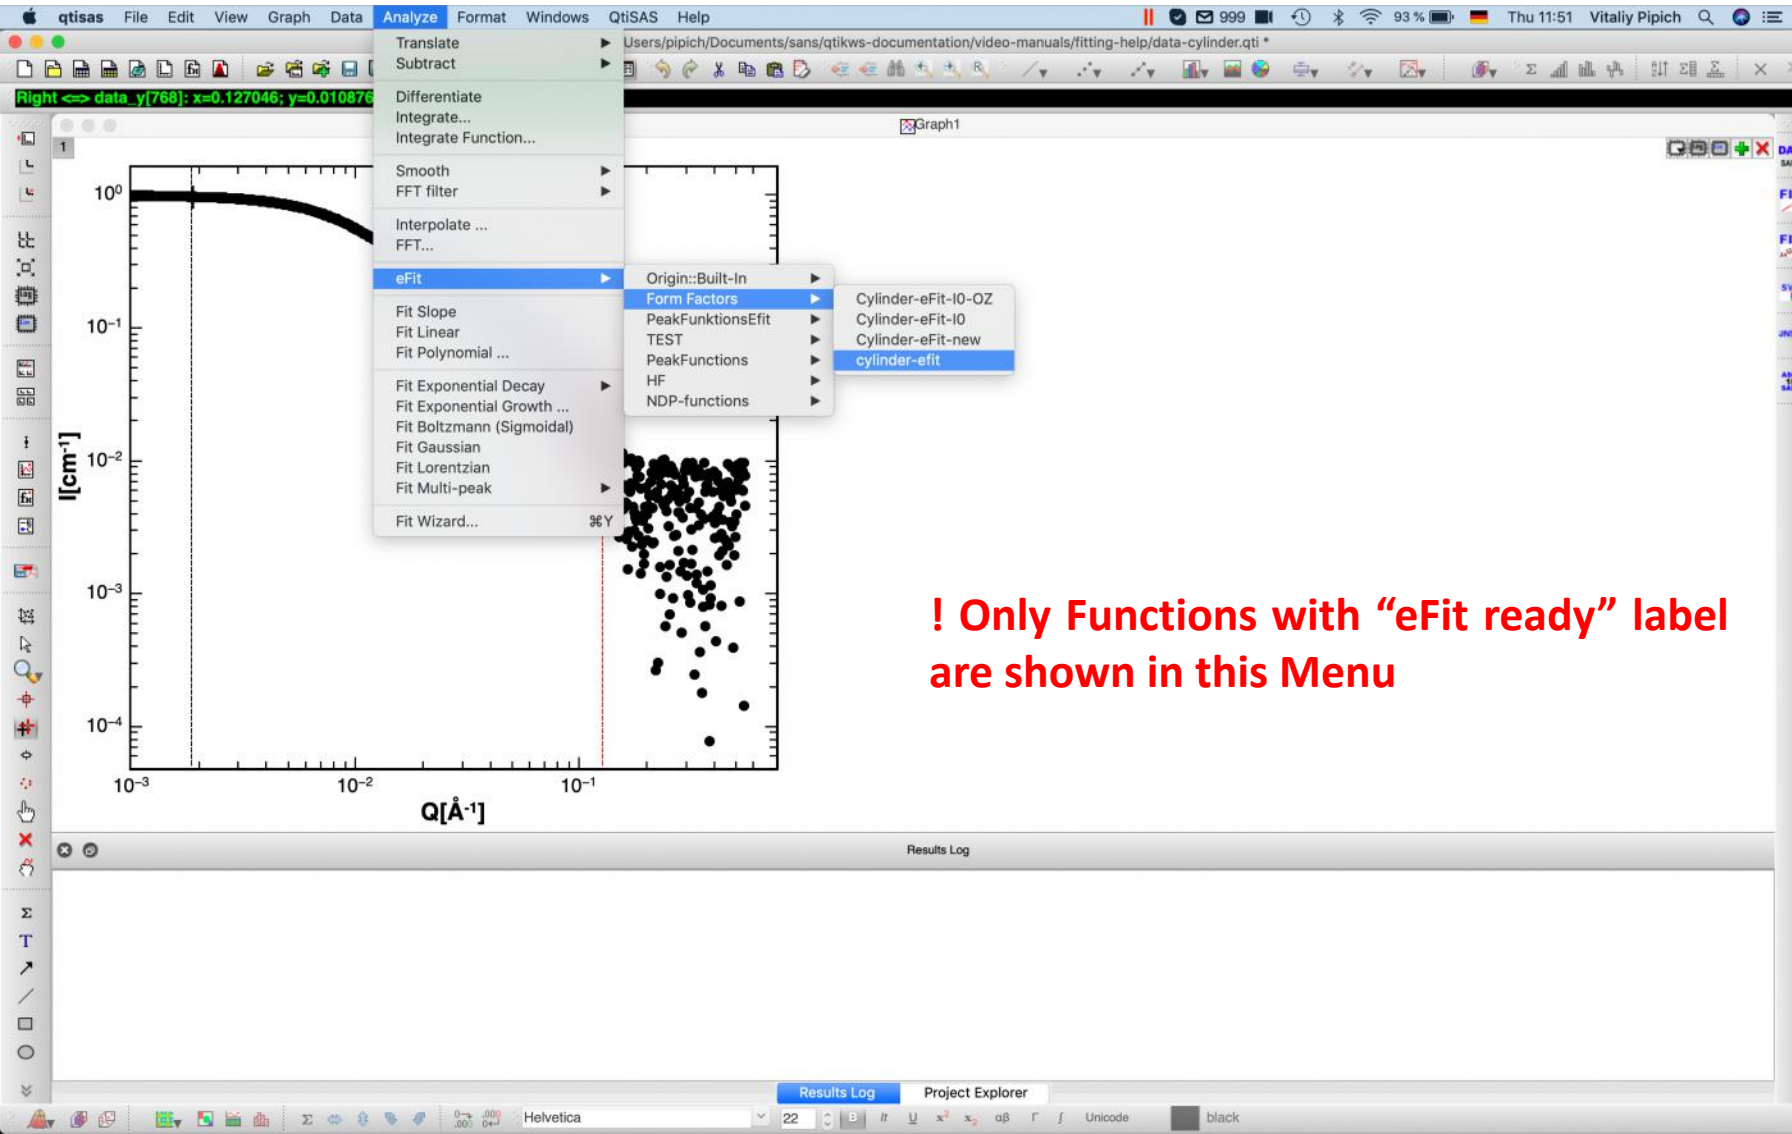

eFit via Analysis | eFit Menu

Step.1 Select **Data Range** of the active curve in active Graph

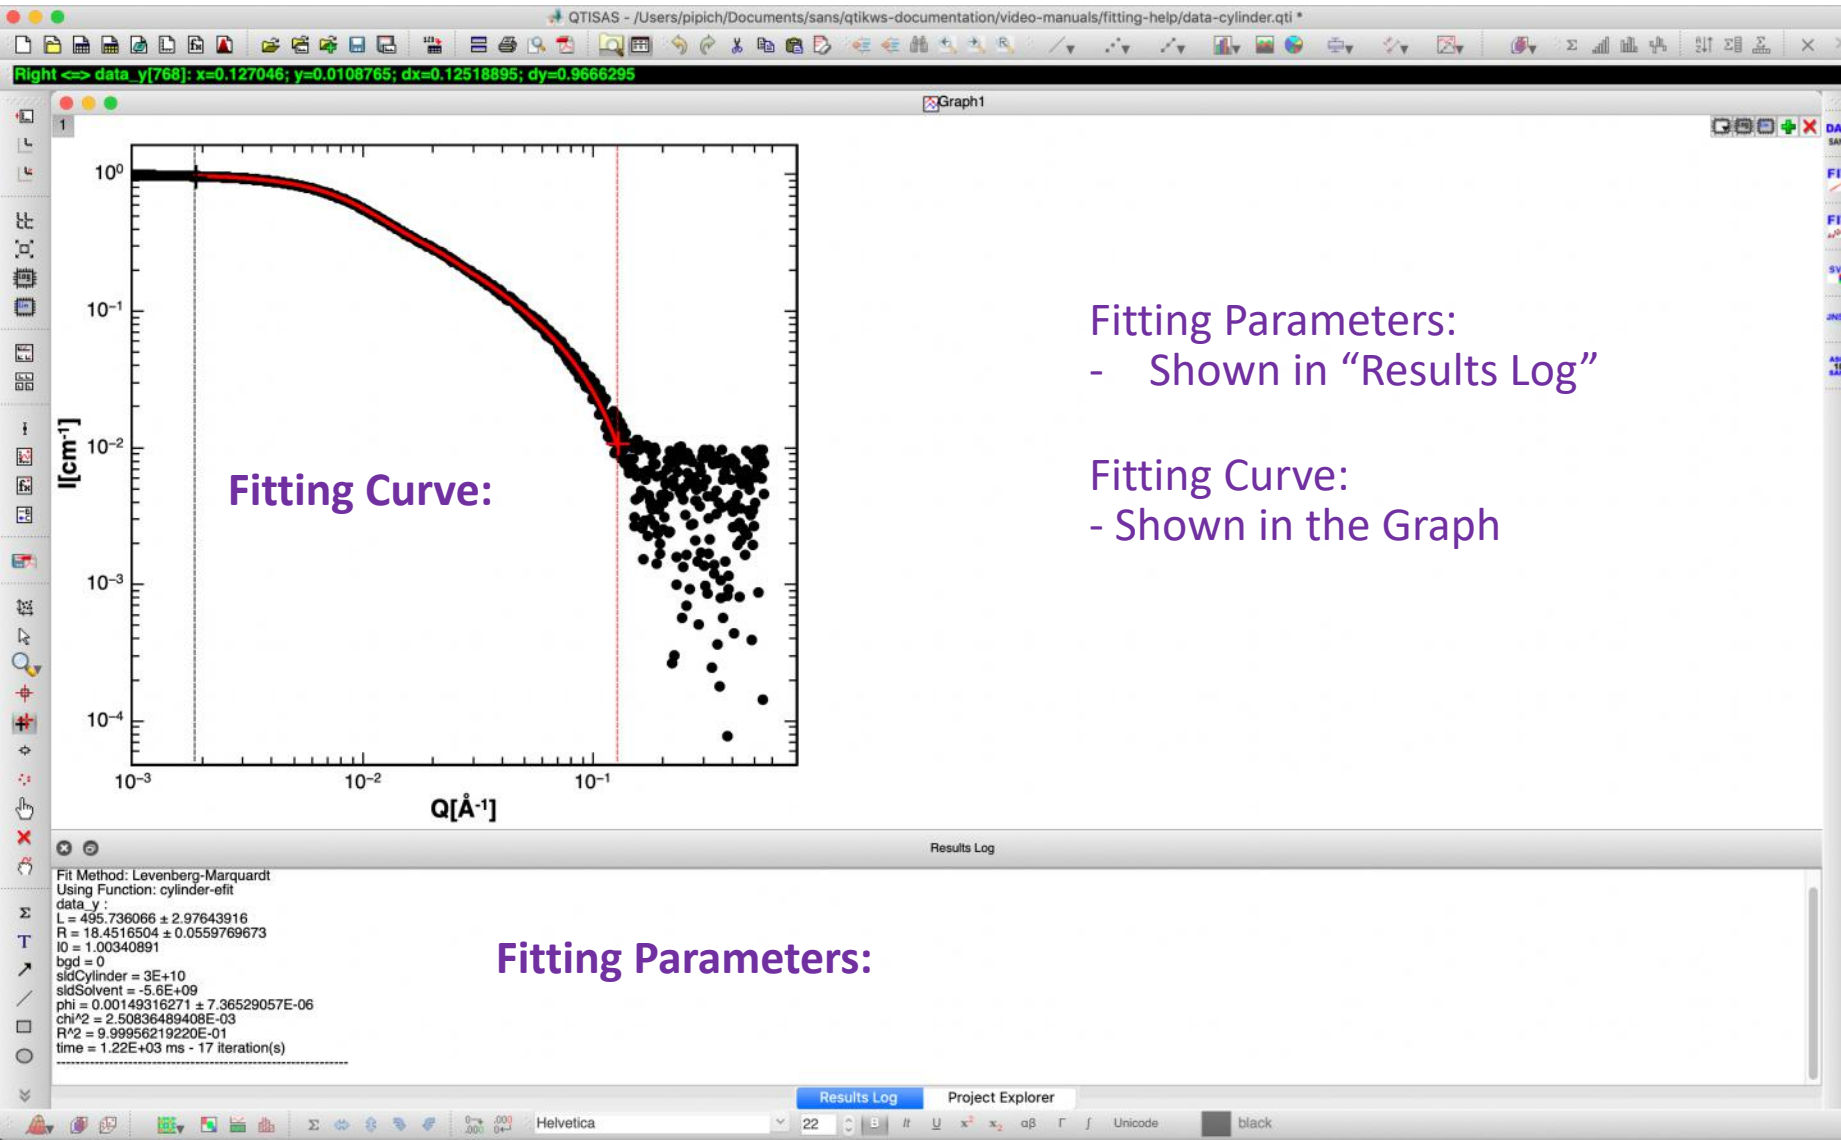

eFit via Analysis | eFit Menu

Step.2 Select eFit function in Analysis | eFit Menu of QtiSAS.

eFit via Analysis | eFit Menu

4-steps in the background:

e-FIT **e-Fit+++** Load Fitting Session

default eFit procedure: Select Function

[1] Script :: Before Fit

"Before Fit"; to skip it: write here **"no-before"**

[2] Fit

"Fit"; to skip it: write here **"no-fit"**

"color=color_name"; select color of the fitting curve

[3] Script :: After Fit

"After Fit"; to skip it: write here **"no-after"**

[4] Simulate

"Simulate"; by default after fit fitting curve is calculated and plotted in the plot;
name of the default table "fitCurve-FUNCTION-NAME";
if you want to have "unique" name write here **"name=TABLE-NAME"**
In case of **"no-fit"**: if you want just to simulate data select option **"yes-simulate"**

[5] Results of the fit is shown in Res-Log:

"no-reslog": to skip it

"yes-res-in-plot": to show results in graph

Functions: HammodaT, Kholodenko, WormLikeC, **Gyrod3D**, mass-fracta, mass-fracta, mass-fracta, membrane-l, pearl-neckla, pearl-neckla, spherical-co, symmetricB, symmetricB, testmicelle-c

Info :: Parameters: SANS, # Curves:, # Functions:

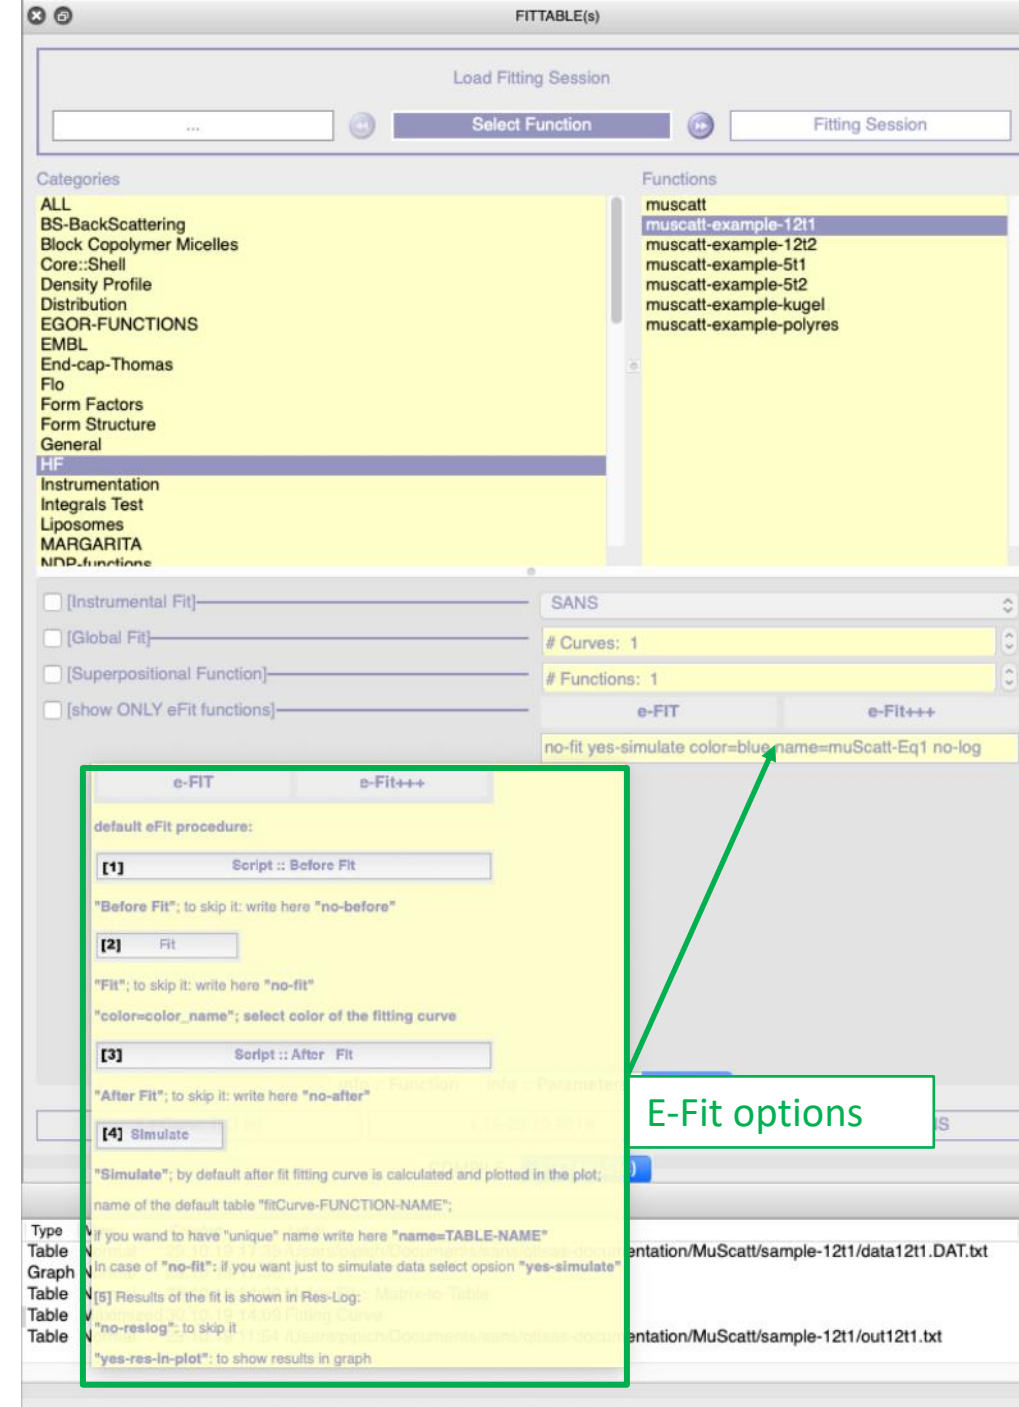

eFit Options

eFit mode options

e-Fit Options:

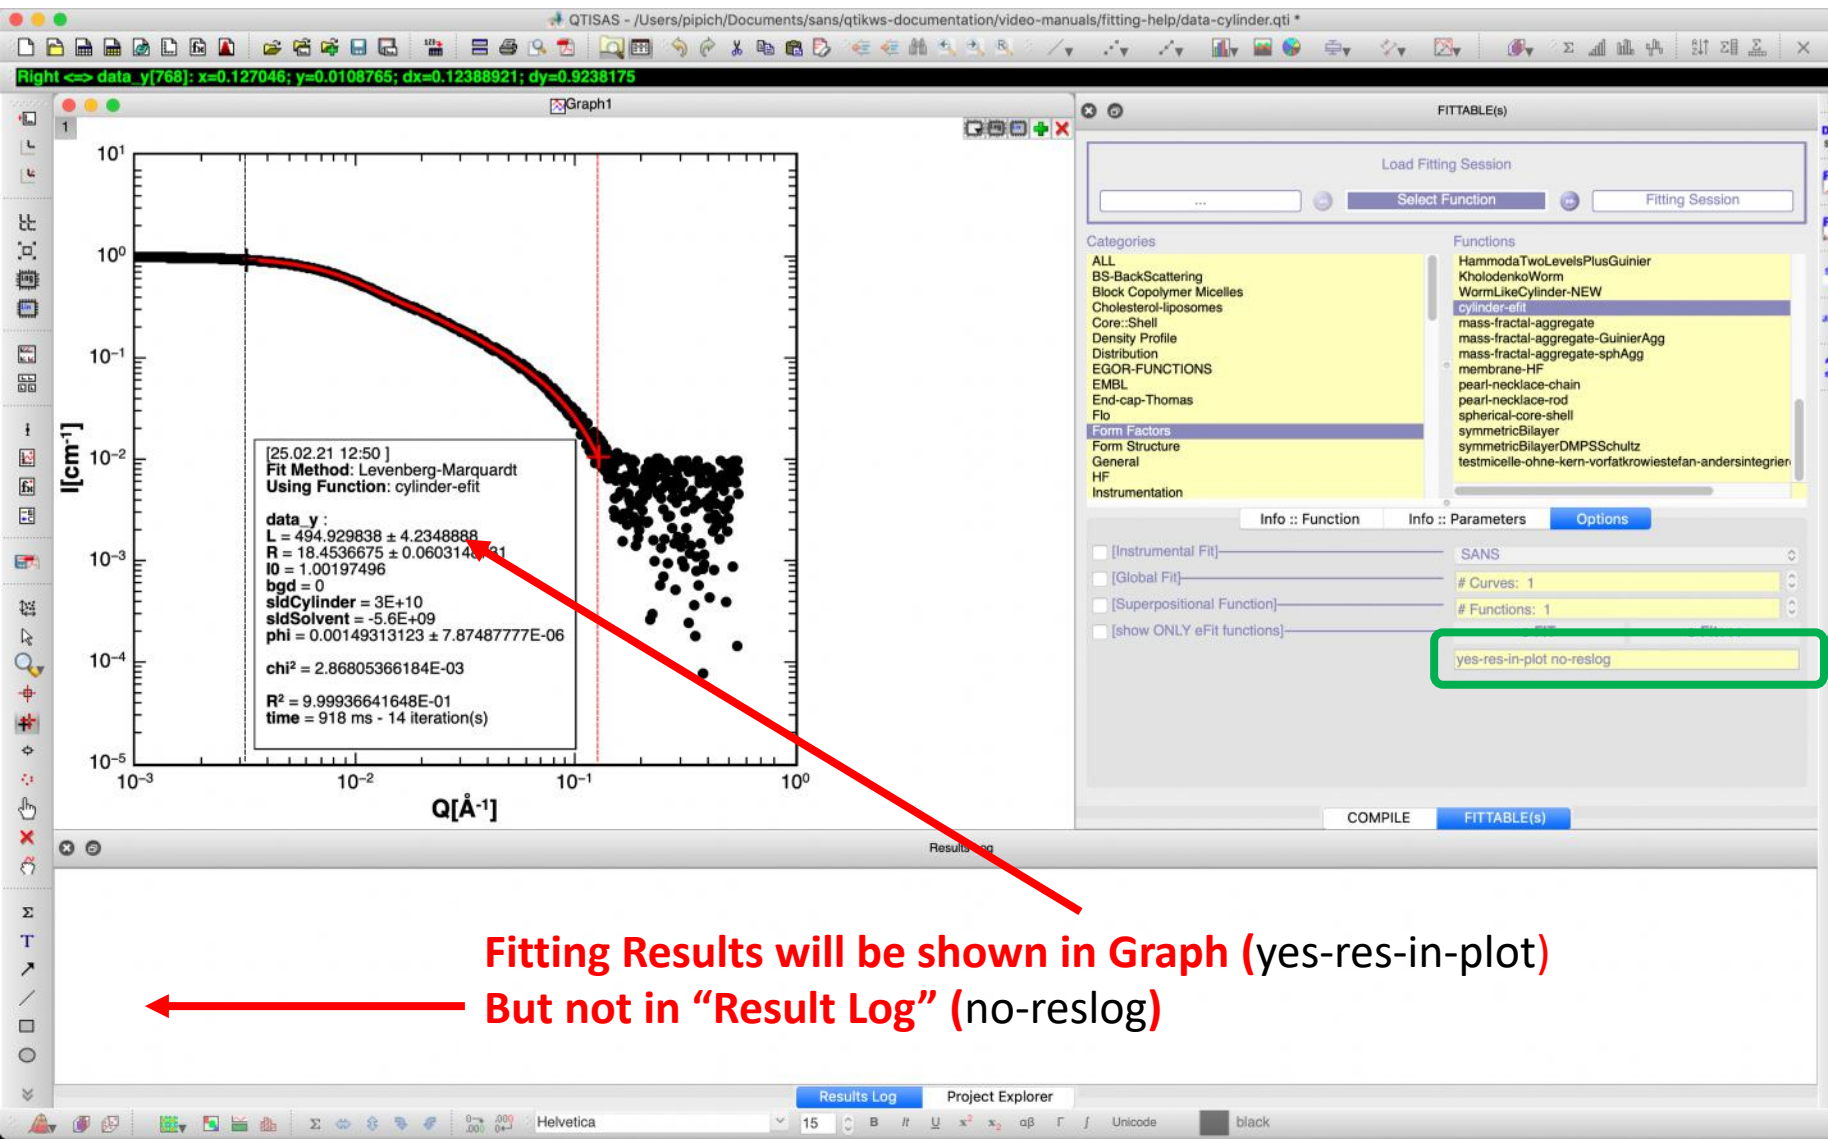

- „no-fit“ : we use just Fitting interface for calculations;
- “yes-simulate“: we calculate & plot active dataset;
- „color=blue“: just selection of color;
- „name=miScatt-Eq1“: instead of classical name of fitting curve we use given name;
- “no-log“: we show no output in log window

yes-res-in-plot

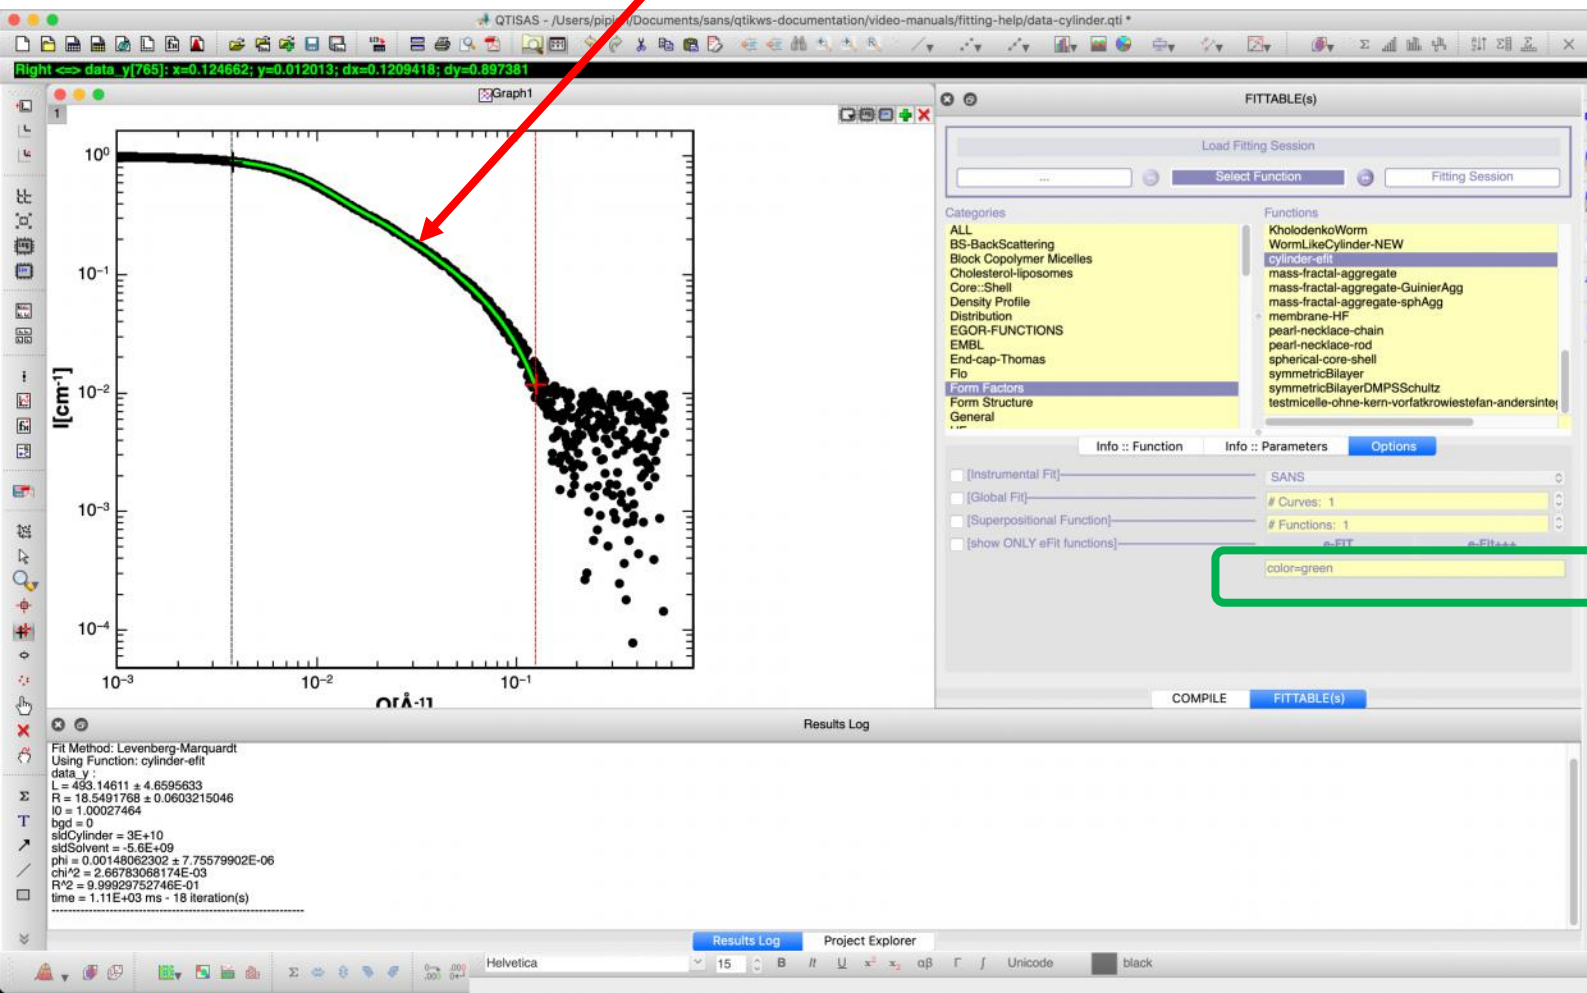

yes-res-in-plot no-reslog

eFit Options: “color=color_name”

Color of the fitting curve could be pre-defined

color=green

eFit Options: “no-fit”
